ADMISSION YEAR: 2020-21ACADEMIC YEAR: 2020-21SEMESTER: FIRSTCOURSE TITLE: ADVANCED MECHANICS OF SOLIDSSub Code: 20MMD12No of Credits : L-T-P-SS
3:0:0:0=3No. of Lecture hours/week :04

COURSE OBJECTIVES:

Exam Duration:3 hours

1. To study the basic concept of stress, stress distribution, elastic constants when the material is subjected to loading within the elastic limits.

Exam Marks :50

2. Study the stress distribution in plane, polar and cylindrical coordinate system.

CIE Marks: 50

- 3. Analyze the material or component subjected to torsion of circular and non-circular shafts (elliptical, triangular bars)
- 4. Study the thermo-elastic properties of the material at elevated temperatures.

#	CONTENTS	Hrs
UNIT-1	Introduction to general theory of elasticity: assumptions and applications of linear elasticity. Analysis of stress, stress tensors. State of stress at a point, principal stresses in two dimensions, Cauchy's stress principle, direction cosines, stress components on an arbitrary plane with stress transformation. Principal stresses in three dimensions, stress invariants, Equilibrium equations, octahedral stresses, Mohr's stress circle, construction of Mohr's Circle for two and three dimensional stress systems, equilibrium equations in polar coordinates for three-dimensional state of stresses.	11
UNIT-2	Introduction to analysis of strain , types of strain, strain tensors, strain transformation. Principal strains, strain invariants, octahedral strains, Mohr's Circle for Strain, equations of Compatibility for Strain, strain rosettes. Stress-strain relations, the Generalised Hooke's law, compatibility conditions, the transformation from Strain components to stress components. Strain energy in an elastic body, St.Venant's principle, uniqueness theorem.	11
UNIT-3	Theories of Failure and Energy Methods: Introduction, Theories of Failure, Use of Factor of Safety in Design, Mohr's theory of Failure, Ideally Plastic Solid, Stress space and Strain space, General nature of Yield locus, Yield Surfaces of Tresca and Von Mises, Stress- Strain relation (Plastic Flow), Prandtl Reuss theory, Saint venant – Von mises equations.	10
	Principle of Superposition, Reciprocal Relation, Maxwell-Betti-Rayleigh Reciprocal theorem, First theorem of Castigliano, Expressions for Strain Energy, Statically indeterminate structures, Theorem of Virtual Work, Second theorem of Castigliano, Maxwell – Mohr integrals.	
UNIT-4	Bending of Beams: Introduction, Straight beams and Asymmetrical Bending, Euler – Bernoulli hypothesis, Shear centre or Centre of Flexure, Shear stresses in thin walled open sections, Bending of curved beams, Deflection of thick curved bars.	10
UNIT-5	Torsion: Introduction, Torsion of general prismatic bars – Solid sections, Torsion of Circular and Elliptical bars, Torsion of equivalent triangular bar, Torsion of rectangular bars, Membrane analogy, Torsion of thin walled tubes, Torsion of thin walled multiple cell closed sections, Multiple connected sections, Centre of twist and flexure centre	10

TEXT BOOKS:

1. Advanced Mechanics of solids, L. S. Srinath, Tata Mc. Graw Hill, 2003.

2. Theory of Elasticity, S. P. Timoshenko and J. N Gordier, Mc.Graw Hill International, 3rd edition, 1972.

REFERENCES BOOKS:

- 1. Theory of Elasticity, Dr. Sadhu Singh, Khanna Publications, 1988
- 2. Elasticity, Theory, Applications & Numericals, Martin H Sadd, Elsevier. 2005.
- 3. Applied Elasticity, Seetharamu & Govindaraju, Interline Publishing.
- 4. Applied Elasticity, C.T. WANG Sc. D. Mc. Graw Hill Book Co.1953.

CO1	Apply basic concepts in continuum mechanics of solids viz. Stress and strain tensors, equilibrium, compatibility and constitutive equations and methods of solution to elasticity problems.
CO2	Evaluate stresses and displacements in simple solids such as pressurized cylinders, shrink
	fitted cylinders, rotating disc and shaft, plate with hole and non-circular shafts and thin tubes
	under torsion.
CO3	Examine bodies subjected to three dimensional stresses for the onset of failure based on failure
	Criteria.
CO4	Analyze deflections in beams subjected to different types of loads for elastic, elastoplastic and
	plastic conditions.
CO5	Evaluate stresses in bars subjected to torsion for elastic, elasto plastic and plastic conditions.

MAPPING OF COs WITH POs

UNIT	1		2		3		4		5	
1. Two full questions (each of 20 Marks) are to be set from each unit.										
2. Student shall answer five full questions selecting one full question from each unit.										

ADMISSION YEAR	: 2020-21	ACADEMIC YEAR: 2020-21								
SEMESTER	: FIRST									
COURSE TITLE: FINITE ELEMENT METHOD										
Sub Code: 20MMD13	No of Credits : L-T-P-SS	No. of Lecture hours/week :04								
	3:0:0:0=3									
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50								
Pre-requisites Mom, Design of Machine Elements.										

- 1. To present the Finite element method (FEM) as a numerical method for engineering analysis of continuum and structures.
- 2. To present Finite element formulation using variation and weighted residual approaches.
- 3. To present Finite elements for the analysis of bars & trusses, beams & frames, plane stress & plane strain problems and 3-D solids, for thermal and dynamics problems.
- 4. Learn to model complex geometry problems and technique of solutions.

#	CONTENTS	Hrs
UNIT-1	Introduction to Finite Element Method : basic steps in finite element method to solve mechanical engineering problems (solid, fluid and heat transfer). Functional approach and Galerkin approach. Displacement approach: admissible functions. Convergence criteria: conforming and nonconforming elements, C0, C1 and Cn continuity elements. Basic equations, element characteristic equations, assembly procedure, boundary and constraint conditions.	11
UNIT-2	 Solid Mechanics: One-dimensional finite element formulations and analysibars- uniform, varying and stepped cross section. Basic (Linear) and higher order elements formulations for axial, torsional and temperature loads with problems. Beams- basic (linear) element formulation-for uniform, varying and stepped cross section- for different loading and boundary conditions, numericals. Trusses, Plane frames and Space frame – basic (Linear) elements formulations for different boundary conditions -axial, bending, torsional, and temperature loads, numericals. 	11
UNIT-3	 Two dimensional finite element formulations for solid mechanics problems: triangular membrane (tria 3, tria 6, tria 10) element, fournoded quadrilateral membrane (quad 4, quad 8) element formulations for in-plane loading with simple problems. Triangular and quadrilateral axi-symmetric basic and higher order elements formulation for axi-symmetric loading with simple numericals. Three dimensional finite element formulations for solid mechanics problems: finite element formulation of tetrahedral element (tet 4, tet 10), hexahedral element (hexa 8, hexa 20), for different loading conditions. Serendipity and Lagrange family alements. 	10
UNIT-4	Finite element formulations for structural mechanics problems: Basics of plates and shell theories: classical thin plate theory, shear deformation theory and thick plate theory. Finite element formulations for triangular and quadrilateral plate elements. Finite element formulation of flat, curved, cylindrical and conical shell elements.	10
UNIT-5	Dynamic analysis: finite element formulation for point/lumped mass and distributed masses system, finite element formulation of one dimensional dynamic analysis: bar, truss, frame and beam element. Finite element formulation of two dimensional dynamic analysis: triangular membrane and axi-symmetric element, quadrilateral membrane and axi-symmetric element. Evaluation of eigen values and eigen vectors applicable to bars, shaft, beams, plane and space frame.	10

TEXT BOOKS:

- 1. T. R. Chandrupatla and A. D. Belegundu, Introduction to Finite Elements in Engineering, Prentice Hall, 3rd Ed, 2002.
- 2. Lakshminarayana H. V., Finite Elements Analysis– Procedures in Engineering, Universities Press, 2004.

REFERENCE BOOKS:

- 4. Bathe K. J, Finite Element Procedures, Prentice-Hall, 2006.
- 5. Cook R. D., Finite Element Modeling for Stress Analysis, Wiley, 1995.

CO1	Understand the concepts of Variation methods and Weighted residual methods.
CO2	Identify the application and characteristics of FEA elements such as bars, beams, plane
	and isoparimetric elements, and 3D element.
CO3	Develop element characteristic equations and generate global stiffness equations.
CO4	Apply suitable boundary conditions to a global structural equation, and reduce it to a
	solvable form.
CO5	Identify how the finite element method expands beyond the structural domain, for
	problems involving dynamics and heat transfer.

ADMISSION YEAR	: 2020-21	ACADEMIC YEAR: 2020-21							
SEMESTER	: FIRST								
COURSE TITLE: ADVANCED DESIGN OF MECHANISM									
Sub Code: 20MMD14	No of Credits : L-T-P-SS	No. of Lecture hours/week :04							
	3:0:0:0=3								
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50							
Pre-requisites	Mom, Design of Machine Elements.								

- 1. To provide a theoretical and practical foundation for analysis and design of articulated mechanical systems for desired applications.
- 2. Develop skills to analyze the displacement, velocity, and acceleration of mechanisms.
- 3. Improve understanding of the synthesis of mechanisms for given tasks.
- 4. To include dynamics for considerations in the design of mechanisms engineering applications.

#	CONTENTS	Hrs.					
UNIT-1	Geometry of Motion: Introduction, analysis and synthesis, Mechanism terminology,	11					
	planar, spherical and spatial mechanisms, mobility, Grashoffs law, Equivalent						
	mechanisms, Unique mechanisms, Kinematic analysis of plane mechanisms:						
	Development of different mechanisms and its inversions like four bar chain						
	mechanism, slider crank mechanism, double slider cranks, mechanism.						
UNIT-2	Generalized Principles of Dynamics: Fundamental laws of motion, Generalized	11					
	coordinates, Configuration space, Constraints, Virtual work, Principle of Virtual						
	Work, Energy and Momentum, Work and kinetic energy, Equilibrium and stability,						
	Kinetic energy of a system, Angular momentum, Generalized momentum. Lagrange's						
	Equation: Lagrange's equation from D'Alembert's principles, Examples, Hamilton's						
	equations, Hamilton's principle, Lagrange's, equation from Hamilton's principle,						
	Derivation of Hamilton's equations, Examples.						
UNIT-3	Analytical Methods of Dimensional Synthesis: Synthesis of Linkages: Type,	10					
	number, and dimensional synthesis, Function generation, Path generation and Body						
	guidance, Precision positions, Structural error, Chebychev spacing, Two position						
	synthesis of slider crank mechanisms, Crank-rocker mechanisms with optimum						
	transmission angle Motion Generation: Poles and relative poles, Location of poles						
	and relative poles, polode, Curvature, Inflection circle						
UNIT-4	Graphical Methods of Dimensional Synthesis: Two position synthesis of crank	10					
	and rocker mechanisms, Three position synthesis, Four position synthesis (point						
	precision reduction) Overlay method, Coupler curve synthesis, Cognate linkages.						
	Analytical Methods of 32 Dimensional Synthesis: Freudenstein's equation for four						
	Analytical synthesis using complex algebra						
UNIT-5	Spatial Mechanisms: Introduction, Position analysis problem, Velocity and	10					
	acceleration analysis, Eulerian angles.						

TEXT BOOKS:

- 1. K.J.Waldron&G.L.Kinzel, "Kinematics, Dynamics and Design of Machinery", Wiley India, 2007.

 Ghosh and Mallick , "Theory of Mechanism and Mechanism", East West press 2007.
 David H. Myszka , "Machines and Mechanisms", Pearson Education, 2005.

CO1	The knowledge of dynamics considerations in mechanism design is essential to use
	commercial multi body dynamics software in mechanical engineering design.
CO2	Carry out mobility analysis of mechanism and perform velocity and acceleration of
	complex planer mechanism.
CO3	Synthesize mechanisms for function generation and path generation.
CO4	Analyze the Dynamics of Mechanical systems using D'Alemberts. ,Lagrange's, and
	Hamiltons Principles.
CO5	Demonstrate the skills to use software to analyze mechanisms, synthesis of linkages.

ADMISSION YEAR: 2020-21 SEMESTER: FIRST

ACADEMIC YEAR: 2020-21

COURSE TITLE: EXPERIMENTAL METHODS							
Sub Code: 20MMD151	51 No of Credits : L-T-P-SS No. of Lecture hours/week :04						
	3:0:0:0=3						
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50					
Pre-requisites Mom, Design of Machine Elements.							

COURSE OBJECTIVES:

- 1. To introduce the concepts of dynamic measurements and analysis of experimental data.
- 2. To expose them to the techniques of Data Acquisition, Signal conditioning and processing.
- 3. To introduce students to different aspects of measuring deformation, strains, and stresses for developing a mechanistic understanding of both the material and the structure behavior.

#	CONTENTS	Hrs
UNIT-1	Introduction: Definition of terms, calibration, standards, dimensions and units,	11
	generalized measurement system, Basic concepts in dynamic measurements,	
	system response, distortion, impedance matching, experiment planning. Analysis of	
	Experimental Data: Cause and types of experimental errors, error analysis.	
	Statistical analysis of experimental data- Probability distribution, gaussian, normal	
	distribution. Chi-square test, Method of least square, correlation coefficient,	
	multivariable regression, standard deviation of mean, graphical analysis and curve	
	fitting, general consideration in data analysis.	
UNIT-2	Data Acquisition and Processing: General data acquisition system, signal	11
	conditioning revisited, data transmission, Analog-to-Digital and Digital-to-	
	Analog conversion, Basic components (storage and display) of data acquisition	
	system. Computer program as a substitute for wired logic. Force, Torque and	
	Strain Measurement: Mass balance measurement, Elastic Element for force	
	measurement, torque measurement. Strain Gages -Strain sensitivity of gage	
	metals, Gage construction, Gage sensitivity and gage factor, Performance	
	Stono's bridges Constant current circuits Strain, gage circuits, Potentionneter, wheat	
	stolle's bildges, Collstant current circuits. Strain Analysis Methods-1 wo element	
	and three element, rectangular and denta losettes, Correction for transverse strains	
	enecis, suess gage - plane shear gage, suess intensity factor gage.	
UNIT-3	Stress Analysis: Two Dimensional Photo elasticity - Nature of light, - wave theory	10
	of light,- optical interference - Polariscopes stress optic law - effect of stressed	
	model in plane and circular Polariscopes, IsoclinicsIso chromatics fringe order	
	determination - Fringe multiplication techniques - Calibration Photoelastic model	
	materials. Separation methods shear difference method, Analytical separation	
	methods, Model to prototype scaling.	
		10
UNIT-4	Three Dimensional Photo elasticity: Stress freezing method, General slice,	10
	Effective stresses, Stresses separation, Snear deference method, Oblique incidence	
	Delari scope and stress data analyses	
LINIT 5	Polari scope and stress data analyses.	10
UN11-5	Photo electic Coating Method Birefringence coating techniques Sensitivity	10
	Reinforcing and thickness effects - data reduction - Stress separation techniques	
	Photo elastic strain gauges	
	Brittle Coatings Method: Brittle coating technique Principles data analysis -	
	coating materials. Coating techniques.	
	Moire Technique - Geometrical approach, Displacement approach- sensitivity of	

Moire data data reduction, In plane and out plane Moire methods, Moire	
photography, Moire grid production. Holography: Introduction, Equation for	
plane waves and spherical waves, Intensity, Coherence, Spherical radiator as an	
object (record process), Hurter, Driffeld curves, Reconstruction process,	
Holograpicinterferomerty, Realtime. and double exposure methods, Displacement	
measurement, Isopachics.

Exam Duration : 3 hours	CIE Marks: 50	Exam Marks : 50								

- 1. To educate the student regarding integration of mechanical, electronic, electrical and computer systems in the design of CNC machine tools, Robots etc.
- 2. To provide students with an understanding of the Mechatronic Design Process, actuators, Sensors, transducers, Signal Conditioning, MEMS and Microsystems and also the Advanced Applications in Mechatronics

#	CONTENTS	Hrs
UNIT-1	INTRODUCTION: Definition and Introduction to Mechatronic Systems. Modeling &Simulation of Physical systems Overview of Mechatronic Products and their functioning, measurement systems. Control Systems, simple Controllers.	11
UNIT-2	STUDY OF SENSORS AND TRANSDUCERS: Pneumatic and Hydraulic Systems,	11
	Mechanical Actuation System, Electrical Actual Systems, Real time interfacing and	
	Hardware components for Mechatronics.	
UNIT-3	ELECTRICAL ACTUATION SYSTEMS: Electrical systems, Mechanical switches,	10
	Sond state switches, solenoids, DC & AC motors, Stepper motors.	
	system building blocks, thermal system building blocks, electromechanical systems	
	hydro-mechanical systems pneumatic systems	
UNIT-4	SIGNAL CONDITIONING: Signal conditioning, the operational amplifier, Protection,	10
	Filtering, Wheatstone Bridge, Digital signals , Multiplexers, Data Acquisition,	
	Introduction to digital system processing, pulse-modulation.	
	MEMS AND MICROSYSTEMS: Introduction, Working Principle, Materials for MEMS	
	and Microsystems, Micro System fabrication process, Overview of Micro Manufacturing,	
	Micro system Design, and Micro system Packaging.	
UNIT-5	DATA PRESENTATION SYSTEMS: Basic System Models, System Models, Dynamic	10
	Response of system.	
	ADVANCED APPLICATIONS IN MECHATRONICS: Fault Finding, Design, Arrangements and Practical Case Studies, Design for manufacturing, User-friendly design

COURSE TITLE: DESIGN FOR ADDITIVE MANUFACTURING									
Sub Code: 20MMD153	No of Credits : L-T-P-SS	No. of Lecture hours/week :04							
	3:0:0:0=3								
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50							

COURSE OBJECTIVES:

- 1. To acquaint the learner on fundamentals of additive manufacturing/rapid prototyping, reverse engineering techniques and its applications.
- 2. To familiarize students with different processes in rapid prototyping systems.
- 3. To teach students about mechanical properties and geometric issues relating to specific rapid prototyping applications.

#	CONTENTS	Hrs
UNIT-1	 Introduction: Need for the compression in product development, history of RP systems, Survey of applications, Growth of RP industry, and classification of RP systems. Stereo Lithography Systems: Principle, Process parameter, Process details, Data preparation, data files and machine details, Application. 	11
UNIT-2	Selective Laser Sintering and Fusion Deposition Modeling: Type of machine, Principle of operation, process parameters, Data preparation for SLS, Applications, Principle of Fusion deposition modeling, Process parameter, Path generation, Applications.	11
UNIT-3	 Solid Ground Curing: Principle of operation, Machine details, Applications. Laminated Object Manufacturing: Principle of operation, LOM materials. Process details, application. 	10
UNIT-4	Rapid Tooling: Indirect Rapid tooling -Silicone rubber tooling – Aluminum filled epoxy tooling Spray metal tooling, Cast kirksite, 3Q keltool, Direct Rapid Tooling Direct. AIM, Quick cast process, Copper polyamide, Rapid Tool, DMILS, Prometal, Sand casting tooling, Laminate tooling soft Tooling vs. hard tooling.	10
UNIT-5	RP Process Optimization: factors influencing accuracy. Data preparation errors, Part building errors, Error in finishing, influence of build orientation.	10

REFERENCES BOOKS:

- 1. Stereo lithography and other RP & M Technologies -Paul F. Jacobs- SME, NY1996
- 2. Rapid Manufacturing Flham D.T & Dinjoy S.S Verlog London2001.
- 3. Rapid automated Lament wood Indus press NewYork
- 4. Wohler's Report 2000 Terry Wohlers Wohler's Association -2000

CO1	Describe product development, conceptual design and classify rapid prototyping systems;
	explain stereo lithography process and applications
CO2	Explain direct metal laser sintering, LOM and fusion deposition modeling processes.
CO3	Demonstrate solid ground curing principle and process.
CO4	Discuss LENS, BPM processes, point out the application of RP system in medical field
	define virtual prototyping and identify simulation components.
CO5	Understand the RP Process Optimizations.

	MAPPING OF COs WITH POs

ADMISSION YEAR : 2020-21 ACADEMIC YEAR: 2020-21 SEMESTER : FIRST COURSE TITLE: MATERIAL HANDLING FOURPMENT DESIGN

COURSE IIILE. MATERIAL HANDLING EQUII MENT DESIGN									
Sub Code: 20MMD154	No of Credits : L-T-P-SS 3:0:0:0=3	No. of Lecture hours/week :04							
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50							

COURSE OBJECTIVES:

- 1. To develop competency for system visualization and design.
- 2. To enable student select materials and to design internal engine components.
- 3. To acquaint student to optimum design and use optimization methods to design mechanical components.
- 4. To enable and evaluate design material handling systems

#	CONTENTS	Hrs
UNIT-1	Elements of Material Handling System: Importance, Terminology, Objectives and benefits of better Material Handling; Principles and features of Material Handling System; Classification of Material Handling Equipment's, Interrelationships between	11
	material handling and plant layout, physical facilities and other organizational functions.	
UNIT-2	Selection of Material Handling Equipment's: Factors affecting for selection; Material Handling Equation; Choices of Material Handling Equipment; General analysis Procedures; Basic Analytical techniques; The unit load concept; Selection of suitable types of systems for applications ; Activity cost data and economic analysis for design of components of Material Handling Systems; functions and parameters affecting service; packing and storage of materials.	11
UNIT-3	 Design of Mechanical Handling Equipment's: Design of Hoists: Drives for hoisting, components, and hoisting mechanisms; rail traveling components and mechanisms; hoisting gear operation during transient motion; selecting the motor rating and determining breaking torque for hoisting mechanisms. Design of Cranes: Hand-propelled and electrically driven E.O.T. overheat Traveling cranes; Traveling mechanisms of cantilever and monorail cranes; design considerations for structures of rotary cranes with fixed radius ; fixed post and overhead traveling cranes; Stability of stationary rotary and traveling rotary cranes. 	10
UNIT-4	Study of systems and Equipment's used for Material Storage: Objectives of storage; Bulk material handling; Gravity flow of solids through slides and chutes; Storage in bins and hoppers; Belt conveyors; Bucket-elevators; Screw conveyors; Vibratory Conveyors; Cabin conveyors; Mobile racks etc.	10
UNIT-5	Material Handling / Warehouse Automation and Safety considerations:	10
	Storage and warehouse planning and design: computerized warehouse planning;	
	Need, Factors and Indicators for consideration in warehouse automation; which	
	Safety and design; Safety regulations and discipline.	

TEXT BOOKS:

- 1. Materials Handling Equipment N. Rudenko, Envee Publishers, New Delhi
- 2. Materials Handling Equipment M.P. Alexandrov. Mie publications, Moscow

REFERENCE BOOKS:

1. Aspects of Material handling - Arora

- Introduction to Material Handling- Ray
 Plant Layout and Material Handling- Chowdary R B

CO1	Explain about the different types of material handling, advantages and disadvantages. It						
	also suggests the selection procedure for the material handling along with its						
	specifications.						
CO2	Need for Material handling also explained with different techniques like						
	Automated Material handling Design Program, Computerized material handling Planning						
	will be dealt.						
CO3	Demonstrate ability to successfully complete Fork Lift Certification to safely						
	and effectively operate in the manufacturing environment.						
CO4	The Material handling is explained with models, selection procedure of material handling						
	is depending on different function oriented systems. This also related with plant layout by						
	which the minimization of the handling charges will come down.						
CO5	The ergonomics related to material handling equipment about design and miscellaneous						
	equipment's.						

MAPPING OF COs WITH POs												
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1		1		1				1		1	1
CO2	1		1						1			
CO3		1	1	1		1					1	
CO4	1				1				1		1	
CO5		1			1				1		1	

QUESTION PAPER PATTERN (SEE)										
Q. No.	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Q10
UNIT	1		2		3		4		5	
1. Two full questions (each of 20 Marks) are to be set from each unit.										
2. Stude	2. Student shall answer five full questions selecting one full question from each unit.									

ADMISSION YEAR	: 2020-21 AC	ADEMIC YEAR: 2020-21								
SEMESTER	: FIRST									
COURSE TITLE : COMPOSITE MATERIALS & TECHONOLOGY										
Sub Code: 20MMD161	No of Credits : L-T-P-SS	No. of lecture hours/week :04								
	3:0:0:0=4									
Exam Duration:3 hours	CIE Marks:50	Exam Marks :50								

- 1. To study the basics of Composite materials.
- 2. To acquaint mechanics of lamina.
- 3. To study the micro and macro analysis of the lamina.
- 4. To gain knowledge of different techniques involved in production of composites.

#	CONTENTS	Hrs
UNIT-1	INTRODUCTION TO COMPOSITE MATERIALS: Definition, Classification,	11
	Types of matrices material and reinforcements, Characteristics &selection, Fiber	
	composites, laminated composites, Particulate composites, Pre-pegs, and sandwich	
	construction.	
	Metal Matrix Composites: Reinforcement materials, Types, Characteristics and	
	selection, Base metals, Selection, Applications	
UNIT-2	MACRO MECHANICS OF A LAMINA: Hooke's law for different types of	11
	materials, Number of elastic constants, Derivation of nine independent constants	
	for orthotropic material, Two - dimensional relationship of compliance and	
	stiffness matrix. Hooke's law for two-dimensional angle lamina, engineering	
	constants - Numerical problems. Invariant properties. Stress-Strain relations for	
	lamina of arbitrary orientation, Numerical problems.	
UNIT-3	MICRO MECHANICAL ANALYSIS OF A LAMINA: Introduction,	10
	Evaluation of the four elastic moduli, Rule of mixture, Numerical problems.	
	Experimental Characterization of Lamina- Elastic Moduli and Strengths	
	Failure Criteria: Failure criteria for an elementary composite layer or Ply,	
	Maximum Stress and Strain Criteria, Approximate strength criteria, Inter-laminar	
	Strength, Tsa-Hill theory, Tsai, Wu tensor theory, Numerical problem, practical	
	recommendations	10
UNIT-4	MACKO MECHANICAL ANALYSIS OF LAMINATE: Introduction, code,	10
	Kircholl hypothesis, Classical Lamination Theory, A, B, and D matrices (Detailed	
	derivation), Special cases of faminates, Numerical problems. Shear Deformation	
	Analyzia of Composite Structures Optimization of Lominstee composite	
	Analysis of Composite Structures: Optimization of Laminates, composite	
	composite pressure vessels, spinning composite disks, composite lattice structures,	
LINIT 5	MANUEACTURING AND TESTING: Lawup and curing open and closed	10
0111-5	mould processing Hand lay up techniques. Bag moulding and filament winding	10
	Pultrusion Pulforming Thermoforming Injection moulding Cutting Machining	
	ioining and repair NDT tests – Purpose Types of defects NDT method -	
	Illtrasonic inspection Radiography Acoustic emission and Acoustic ultrasonic	
	method	
	Applications: Aircrafts missiles Space hardware automobile Electrical and	
	Electronics Marine Recreational and sports equipment-future potential of	
	composites	

TEXT BOOKS:

- 1. Autar K. Kaw, Mechanics of Composite materials, CRC Press, 2nd Ed, 2005.
- 2. Madhijit Mukhopadhay, Mechanics of Composite Materials & Structures, Universities Press, 2004.

REFERENCE BOOKS:

- 1. J. N. Reddy, Mechanics of Laminated Composite Plates & Shells, CRD Press, 2nd Ed, 2004.
- 2. Mein Schwartz, Composite Materials handbook, McGraw Hill, 1984.
- 3. Rober M. Jones, Mechanics of Composite Materials, Taylor & Francis, 1998.
- 4. Michael W, Hyer, Stress analysis of fiber Reinforced Composite Materials, Mc-Graw Hill International, 2009.

CO1	Identify the role of matrices and reinforcements used in practical composite structures.
CO2	Analyze problems on macro mechanical behavior of lamina.
CO3	Analyze problems on micro and assess the strength of laminated composite and predict
	its failure for given static loading conditions.
CO4	Understand various method involved in synthesis of composites and to optimize
	laminates.
CO5	Develop understanding of different methods of manufacturing and testing of composites

MAPPING OF COs WITH POs												
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1		1	1					1			
CO2		1		1	1						1	
CO3		1		1	1				1		1	
CO4	1		1		1						1

QUESTION PAPER PATTERN (SEE)										
Q. No.	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Q10
UNIT	1		2		3		4		5	
1. Two f	1. Two full questions (each of 20 Marks) are to be set from each unit.									
2. Stude	nt shall	answei	five fu	ll questio	ons selec	ting one	e full que	stion from	m each	unit.

ADMISSION YEAR	: 2020-21	ACADEMIC YEAR: 2020-21							
SEMESTER	: FIRST								
COURSE TITLE: TECHANICAL ACOUSTICS									
Sub Code: 20MMD162	No of Credits : L-T-P-SS	No. of Lecture hours/week :04							
	3:0:0:0=3								
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50							

- 1. To acquaint students the fundamentals of acoustics related to generation, transmission and control techniques.
- 2. To provide basic knowledge and understanding of noise and vibration control necessary for professional practice as a noise control engineer.
- 3. To expose them to acoustic instrumentation and techniques of sound measurement.
- 4. To understand Noise reduction and control techniques in Machinery, auditorium, and HVAC systems

#	CONTENTS	Hrs
UNIT-1	Introduction to Acoustics: Basics of acoustics - speed of sound, wavelength, frequency, and wave number, acoustic pressure and particle velocity, acoustic intensity and acoustic energy density, spherical wave, directivity factor and directivity index, levels and the decibel, combination of sound sources, octave bands, weighted sound levels.	11
UNIT-2	Acoustics Evaluation Techniques: Room Acoustics, Reverberation time, Acoustic materials, Absorption and Absorption Coefficient, Evaluation techniques. Sound and vibration analyzer (SVAN) Sound sources and Propagation – Plane and spherical waves, near and far field, free and reverberant field - Anechoic and Reverberant chambers.	11
UNIT-3	Noise and physiological effects: Noise and physiological effects, Acoustic criteria, the human ear, hearing loss, industrial noise criteria, speech interference level, noise criteria for interior spaces, Loudness, hearing, hearing loss, hearing protectors, Mechanism -Weighted Networks -Noise standards for traffic - Community noise - Aircraft - Environmental noise, Articulation index, and Machinery acoustics.	10
UNIT-4	Acoustic Instrumentation: Sound level and intensity meters - Octave analyzers, octave band filters, acoustic analysers, dosimeter, measurement of sound power, sound power measurement in a reverberant room, sound power measurement in an anechoic chamber, sound power survey measurements, measurement of the directivity factor, calibration, noise measurement procedures. Sound power estimation - Instruments for building acoustics -Speech Interference - Sound systems and Auditorium acoustics.	10
UNIT-5	Noise control techniques: At source and transmission path-Barriers and Enclosures- HVAC system noise, Machinery acoustics and levels- Near field monitoring and diagnostics - Active noise control techniques. Noise control in rooms, sound absorption.	10

TEXT BOOKS:

1. J.D. Irwin and E.R.Graf, (2001), Industrial Noise and Vibration control, Prentice Hall Inc.

REFERENCE BOOKS:

1. Bies and Colin. H. Hanson, (2001): Engg. Noise Control, E &FN SPON.

- 2. Noise Control Hand Book of Principles and Practices, David M.Lipsdomls Van Nostrand Reinhold Company.
- 3. Acoustic and Noise Control, (2000), B.J. Smith, R.J.Peters, Stephanie Owen.
- 4. Harris, C.K.–Handbook of Noise Control.
- 5. Petrusowicz and Longmore Noise and Vibration control for industrialists.
- 6. Thumann and Miller- Secrets of Noise control.

CO1	Select appropriate noise control techniques for the solution of practical noise problems and
	evaluate their performance.
CO2	Understand how to use pressure wave expressions to describe sound transmission in
	different media.
CO3	Analyze complex noise environments and predict sound levels in desired locations.
CO4	Evaluate acoustic enclosures, barriers and walls for effective noise control.
CO5	Become familiar with sound measurement instrumentation.

MAPPING OF COs WITH POs												
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1		1	1					1		1	
CO2		1		1			1		1			
CO3	1		1		1				1		1	
CO4		1		1	1						1	
CO5	1			1	1				1			

QUESTION PAPER PATTERN (SEE)										
Q. No.	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Q10
UNIT								5		
1. Two f	full que	stions (each of	20 Mark	s) are to	be set f	rom each	ı unit.		
2. Stude	nt shall	answei	five fu	ll questio	ons selec	ting one	e full que	stion from	m each	unit.

ADMISSION YEAR	: 2020-21	ACADEMIC YEAR: 2020-21								
SEMESTER	: FIRST									
COURSE TITLE : DESIGN OPTIMIZATION										
Sub Code: 20MMD163	No of Credits : L-T-P-SS	No. of lecture hours/week :04								
	3:0:0:0=3									
Exam Duration : 3 hours	CIE Marks: 50	Exam Marks : 50								
Pre-requisites	Research methodology, Composite material, Basic mathematics.									

- 1. To induce the students to the basics of Design optimization.
- 2. To acquaint Optimum Design Problem Formulation.
- 3. To analyze sensitivity analysis, Linear and Non Linear Approximations and Optimization Disciplines.
- 4. To explore and distinguish knowledge of different Manufacturability in Optimization Problems and Design Interpretation.

#	CONTENTS	Hrs
UNIT-1	Engineering Design Practice: Evolution of Design Technology, Introduction	11
	to Design and the Design Process, Design versus Analysis, Role of Computers	
	in Design Cycle, Impact of CAE on Design, Numerical Modeling with FEA	
	and Correlation with Physical Tests.	
UNIT-2	Optimum Design Problem Formulation: Types of Optimization Problems,	11
	The Mathematics of Optimization, Design Variables and Design Constraints,	
	Feasible and Infeasible Designs, Equality and Inequality Constraints, Discrete	
	and Continuous Optimization, Linear and Non Linear Optimization.	
	Optimization Theory – Fundamental Concepts, Global and Local Minimum,	
	Gradient Vector and Hessian Matrix, Concept of Necessary and Sufficient	
	Conditions, Constrained and Unconstrained Problems, Lagrange Multipliers	
	and Kuhn Tucker Conditions	
UNIT-3	Sensitivity Analysis, Linear And Non Linear Approximations:	10
	Gradient Based Optimization Methods – Dual and Direct.	
	Optimization Disciplines: Conceptual Design Optimization and Design Fine	
	Tuning, Combined Optimization, Optimization of Multiple Static and	
	Dynamic Loads, Transient Simulations, Equivalent Static Load Methods	
UNIT-4	Manufacturability In Optimization Problems: Design For Manufacturing,	10
	Manufacturing Methods and Rules, Applying Manufacturing Constraints to	
	Optimization Problems.	
	Design Interpretation: Unbound Problems, Over Constrained Problems,	
	Problems with No of Multiple Solutions, Active and Inactive Constraints,	
	Constraint Violations and Constraint Screening, Design Move Limits, Local	
	and Global Optimum.	1.0
UNIT-5	Dynamic Programming: Introduction, Multistage decision processes,	10
	Principle of optimality, Computational Procedure in dynamic programming,	
	Initial value problem, Examples.	
	Applications of Optimization in Engineering Design: Automotive,	
	Aerospace and General Industry Applications, Optimization of Metallic and	
	Composite Structures, Minimization and Maximization Problems, MDO and	
	MOO.	

NOTE: the students are advised to prepare the report in the form of assignment to understand the subject

and its relevance in the industry

TEXT BOOKS:

- 1. S.S.Rao, Engineering Optimization: Theory and Practice, John Wiley, 2009
- 2. JasbirArora, Introduction to Optimum Design, McGraw Hill, 2011.

REFERENCE BOOKS:

- 2. Optimization methods -K.V.Mital and C. Mohan, New age International Publishers, 1999.
- 3. Optimization methods for Engg. Design R.L Fox, Addison Wesley, 1971.

	L ,
CO1	It provides the student with knowledge required to optimize an existing design
	with single or multiple objective functions.
CO2	Skills acquired through commercial optimization programs
CO3	Acquire the knowledge of engineering system design
CO4	Apply the concept of manufacturing constraint and design interpretation to
	optimization problems
CO5	Understand the concept of dynamic programming and apply the concept of
	optimization in engineering design

MAPPING OF COs WITH POs												
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO5	1		1						1		1	

QUESTION PAPER PATTERN (SEE)										
Q. No.	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Q10
UNIT	1	l		2	3		4			5
1. Two f	1. Two full questions (each of 20 Marks) are to be set from each unit.									
2. Stude	nt shall	answei	five fu	ll questio	ons selec	ting one	e full que	stion from	m each	unit.

ADMISSION YEAR	: 2020-21	ACADEMIC YEAR: 2020-21							
SEMESTER	: FIRST								
COURSE TITLE: PRODUCT DESIGN FOR QUALITY									
Sub Code: 20MMD164	No of Credits : L-T-P-SS	No. of Lecture hours/week :04							
	3:0:0:0=3								
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50							

- 1. Apply the principles of product design to modify existing engineering systems or to develop new artifacts.
- 2. Design a system taking into consideration the concepts of ease of production, maintenance, handling, installation etc.
- 3. Translate the concepts of economics in design, optimization of design and human factors approach to product design.

#	CONTENTS	Hrs
UNIT-1	Design for quality: Taguchi's Approach to Quality, On-line and Off-line Quality	11
	Control, Quality Loss Function, System Design, Parameter Design, Design for	
	Environment, Human factor design, Design for casting and forging, Causes of	
	Variation.	
UNIT-2	Quality Function Deployment –Introduction, QFD team, benefits, voice of customer,	11
	organisation of information, house of quality, QFD process	
	Design of Experiments : Basic methods- Two factorial experiments-Extended method	
	reduced tests and fractional experiments, orthogonality, base design method, higher	
	dimensional fractional factorial design	
UNIT-3	Failure Mode Effect Analysis: Refining geometry and layout, Failure tree analysis,	10
	Defects and failure modes Techniques of failure analysis, Filed inspection of failure,	
	Macroscopic and Microscopic examination, Additional tests, Analysis of data and	
	report of failure.	
UNIT-4	Statistical Consideration in Product Design and Development	10
	Frequency distributions and Histograms- Run charts –stem and leaf plots- Pareto	_
	diagrams-Cause and Effect	
	diagrams-Box plots- Probability distribution- Statistical Process control-Scatter	
	diagrams – Multivariable charts	
UNIT-5	Six Sigma – Overview, Basics and history of the approach for six sigma,	10
	Methodology and focus, the application of Six Sigma in production and in-service	
	industries, Relationship of Six Sigma and Lean Management, linking Six Sigma	
	project goals with organizational strategy

- 5. Engineering Design, George E Dieter, 3rd Edition, McGraw hill International Edition, ISBN: 0-07- 116204-6

CO1	Apply a system based approach for quality management
CO2	Identify the importance of various principles of quality in product or service
CO3	Use statistical tools in product development
CO4	Apply basic risk analysis and experiment design techniques into practical cases
CO5	Demonstrate knowledge about Six sigma, Design of Experiments

ADMISSION YEAR: 2020-2021 SEMESTER : FIRST

ACADEMIC YEAR: 2020-21

$\mathbf{COURSETITIE} \cdot \mathbf{CO}$	MPUTER AIDED ENGINEERING	DEIGN WORK TOOL -LAB								
COURSE TITLE . CONITUTER AIDED ENGINEERING DEIGN WORK TOOL -LAD										
Sub Code: 20MMDL17	No of Credits : L-T-P-SS	No. of lecture hours/week :03								
	0:0:3:0 =2									
Exam Duration : 3 hours	CIE Marks: 50	SEE Marks : 50								

COURSE OBJECTIVES:

- 1. The objective of this lab is to acquaintance students with knowledge in the interface of 3-D software and to make students efficient to produce CAED designs.
- 2. By the end of course one should also be able to understand what a machine drawing is and will also be able to produce machine drawings.
- 3. To gain knowledge about all symbols used in production drawings and how they are inserted in production drawings using design software's.

PART –A COMPUTER AIDED ENGINEERING DESIGN- CAED BASICS							
1	Introduction about CAED and different workbenches in it.	4					
2	Interface, Sketch Tools, View Tool bar, Profile Tool bar, Operation Tool bar, Tools, Constrain tool bar, Transformation Tool bar, User Selection Filter,.	4					
3	Sketch Based Features, Dress up Features, Transformation Features, Reference Elements, Measure, Thickness, Boolean Operations.	4					
4	Walls, Cutting and Stamping, Bending, Rolled Walls	4					
5	Visualizations Surface, Operations,	4					
6	Wireframe, Replication. Standards Product Structure Tools, Constrains	4					
	PART –B						
	DESIGN AND DEVELOPMENT OF A PRODUCT USING CAD WORK TOOL	Hours					
1	Introduction to Geometric Dimensioning and Tolerance, Weld Symbols, GD&T Symbols, Types of Tolerances, Types of views, Roughness Symbols	4					
2	Views, Annotations, Sheet Background.	4					
3	Design of any two types of Aircraft structures	4					
4	Design of fuselage with internal components	4					
5	Design of Nose cone structures	4					
6	Design of Main landing gear and nose landing gear	6					

TEXT BOOKS:

- 1. 3D Modelling and practices, Engineering, Prof P. Krishnakumar
- 2. Introduction to CATIA V5 Release 19, Book by Kirstie Plantenberg
- 3. CATIA V5 Design Fundamentals Jaecheol Koh

REFERENCE BOOKS:

1. CATIA V5 Workbook Release 19, Book by Richard Cozzens

CO1	Understand the concepts and various tools used in design module.
CO2	Understand the design of typical structural components
CO3	Understand the techniques and standards of designing a component in CAD Software
CO4	Understand the design of three view diagram of a typical aircraft.
CO5	Analyze and evaluate CAD models

MAPPING OF COs WITH POs												
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CONTINOUS INTERNAL	L EVALUATION (CIE)
Evaluation of lab manual	30 Marks
Internal evaluation	10 Marks
Viva-voce	
	10 Marks
Total	50 Marks

	SEMESTER END EXAMINATION (SEE)									
SI Break Up of Max. Marks										
No.	Particulars	Marks	Write Up	MODELLING	ANALYSIS					
1	PART -A	15	05	05	05					
2	PART-B	25	05	10	10					
3	Viva Voce	10								

TOTAL MARKS	50	10	25	15	
-------------	----	----	----	----	--

- > Two Full Questions to be set.
- > Students shall be to be answered two full Questions.
- Each question (Experiments contains different Marks and it is clearly mentioned in the above table)
- > Changing of Experiments is not allowed from any unit
- Viva Voce is compulsory

ADMISSION YEAR : 2020-21 SEMESTER : FIRST ACADEMIC YEAR: 2020-21

COURSE TITLE: TECHANICAL SEMINAR										
Sub Code: 20MMDS18	No of Credits : L-T-P-SS	No. of Lecture hours/week :								
	0:0:2:0=02									
Exam Duration:	CIE Marks: 50	SEE Marks :								

COURSE OBJECTIVES:

- 1. Exposure of students to a variety of research projects and activities in order to enrich their academic experience.
- 2. An opportunity for students to develop skills in presentation and discussion of research topics in a public forum.
- 3. To identify good journals and journal papers; study the papers and understand, analyze, interpret and explain the contents of the paper.

GUIDELINES

1.Each student, under the guidance of a Faculty, is required to

• Choose, preferably through peer reviewed journals, a recent topic of his/her interest relevant to the Course of Specialization.

• Carryout literature survey, organize the Course topics in a systematic order.

- Prepare the report with own sentences.
- Type the matter to acquaint with the use of Micro-soft equation and drawing tools or any such facilities.
- Present the seminar topic orally and/or through power point slides.
- Answer the queries and involve in debate/discussion.
- Submit two copies of the typed report with a list of references.

2. All students should attend the seminars of other students of their specialization.

SCHEME FOR CONTINUOUS INTERNAL EVALUATION (CIE)

Each presentation shall be evaluated for 50 marks. Average marks obtained for three best presentations will be the student's CIE marks.

Marks distribution

Seminar Report: 20 marks

Presentation skill:20 marks

Question and Answer:10 marks

CO1	To identify good journals and journal papers
CO2	study the papers and understand, analyze, interpret and explain the contents of the paper

CO3	understand the shortcomings and plus points of published papers
CO4	To develop overall skills for technical communication and help technical decision making.

CO5 To understand the latest research in their field of study

ADMISSION YEAR SEMESTER

ACADEMIC YEAR: 2020-21

COURSE TITLE: INDUSTRY VISIT									
Sub Code: 20MMDM19	No of Credits : L-T-P-SS	No. of Lecture hours/week :							
	0:0:0:2=02								
Exam Duration:	CIE Marks: 50	SEE Marks :							

COURSE OBJECTIVES:

- 1. An opportunity to get exposure to the real workstations, plants, machines and systems.
- 2. to understand the end-to-end process at all levels
- 3. to understand the company policies in terms of production, quality, and service management.
- 4. Expert briefing about the functioning of machines and systems.

: 2020-21

: FIRST

GUIDELINES

- 1. Industrial visit shall be arranged according to the academic requirements and as per the norms of the college.
- 2. HOD must certify that the tour is required for the students or is related to their curriculum.
- 3. The visiting companies shall be relevant and suitable ones to the specialization and academic requirements.
- 4. Industrial visit shall fall within the stipulated period set by the college.
- 5. The stipulated period shall be informed to the Faculty in-charge and Students through HOD well in advance to enable go through a diligent process including communicating to the potential companies and obtaining permission to visit.
- 6. The entire plan including permission letter from the visiting companies, permission letter, route map, list of students with their contact no. (Preferably mobile phone), list of faculty with their contact details, undertaking letter from student and parent and permit shall be available in the file and be checked by HOD.
- 7. The bus shall carry a banner exhibiting the college name and Industrial Visit.
- 8. Students must carry security ID cards with details of their parents or local guardians and their contact numbers.
- **9.** Participating students must be given an undertaking that they will abide by the rules and guidelines throughout the tour.

SCHEME FOR CONTINUOUS INTERNAL EVALUATION (CIE)

CIE marks for the Industrial visit report (30 marks), seminar (10 marks) and viva voce (10 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session by the student) by the committee constituted for the purpose by the Head of the Department, The committee shall consist of three faculty from the department.

CO1	Students' exposure to industrial environments and experiences is undeniably one way for
	students to appreciate their theoretical learning to a more practical learning.
CO2	Acquaint Students with Interesting Facts and Newer Technologies.
CO3	Using the case study approach within the visit brings out critical thinking among students.
CO4	Practical application of instruments handled during course curriculum.
CO5	Students Aware with Industry Practices.

ADMISSION YEAR :	2020-21	ACADEMIC YEAR: 2020-21
SEMESTER :	SECOND	
COURSE TITI	LE:ADVANCED THEORY	OF VIBRATIONS
Sub Code: 20MMD21	No of Credits : L-T-P-SS	No. of Lecture hours/week :04
	3:0:0:0=3	
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50

- 1. To acquainting the learners the importance of vibrations in design of machine parts subject to vibrations.
- 2. To explore the concepts of transient and Non-linear vibrations.
- 3. To acquire the skill of vibration measurements and its applications.
- 4. To evaluate the results of Transient and Nonlinear vibrations.

#	CONTENTS	Hrs
UNIT-1	Review of Mechanical Vibrations: Basic concepts; free vibration of single degree of freedom systems with and without damping, forced vibration of single DOF-systems, Natural frequency. Transient Vibration of single Degree-of freedom systems: Impulse excitation, Arbitrary excitation.	11
UNIT-2	Vibration Control: Introduction, Vibration isolation theory, Vibration isolation and motion isolation for harmonic excitation, practical aspects of vibration analysis, shock isolation, Dynamic vibration absorbers, and Vibration dampers. Vibration Measurement and applications: Introduction, Transducers, Vibration pickups, Frequency measuring instruments, Vibration exciters, Signal analysis.	11
UNIT-3	 Modal analysis: Dynamic Testing of machines and Structures, Experimental Modal analysis. Vibrations of beams: equation of motion, modal analysis, approximate methods, initial value problem, forced vibrations, special problems, wave propagation Vibrations of membranes: equations of motion, modal analysis, and approximate methods. Vibrations of plates: equations of motion, modal analysis, approximate methods. 	10
UNIT-4	Random Vibrations : Random phenomena, Time averaging and expected value, Frequency response function, Probability distribution, Correlation, Power spectrum and power spectral density, Fourier transforms, FTs and response.	10
UNIT-5	 Signature analysis and preventive maintenance, Vibration testing equipment, signal generation, measuring and conditioning instruments. Vibration testing equipment: Signal analysis instruments, Vibration signatures and standards. 	10

TEXT BOOKS:

- 1. S. S. Rao, "Mechanical Vibrations", Pearson Education, 4^{TH} Edition.
- 2. S. Graham Kelly," Fundamentals of Mechanical Vibration" -McGraw-Hill, 2000 .

CO1	Construct Equations of motion based on free body diagrams
CO2	Analyse systems under free and forced vibrations for natural frequency of vibration.
CO3	Evaluate Mechanical Systems are using modal analysis.
CO4	Develop solutions through testing for vibrations and signature analysis techniques.
CO5	Apply the fundamentals of vibration to its measurement and analysis.

ADMISSION YEAR	: 2020-21 A	CADEMIC YEAR: 2020-21								
SEMESTER	: SECOND									
COURSE TITLE: DESIGN FOR FATIGUE LOADING										
Sub Code: 20MMD22	No of Credits : L-T-P-SS	No. of Lecture hours/week :04								
	3:0:0:0=3									
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50								

- 1. To identify failure modes and evolve design by analysis methodology.
- 2. To understand the concept of fatigue testing of materials including criteria for fatigue design and different fatigue life models.
- 3. To understand the concept of crack nucleation, crack growth and fracture of materials using fundamentals of linear elastic fracture mechanics.
- 4. To understand the different surface failure mechanisms with stress distribution of various contact surfaces.

#	CONTENTS	Hrs
UNIT-1	Introduction: Role of failure prevention analysis in mechanical design, Modes of mechanical failure, Review of failure theories for ductile and brittle materials including Mohr's theory and modified Mohr's theory, Numerical examples. Fatigue of Materials: Introductory concepts, High cycle and low cycle fatigue, Fatigue design models, Fatigue design methods ,Fatigue design criteria, Fatigue testing, Test methods and standard test specimens, Fatigue fracture surfaces and macroscopic features, Fatigue mechanisms and microscopic features	11
UNIT-2	Stress-Life (S-N) Approach: S-N curves, the statistical nature of fatigue test data, General S-N behaviour, Mean stress effects, Different factors influencing S-N behaviour, S-N curve representation and approximations, Constant life diagrams, Fatigue life estimation using SN approach. Strain-Life(ε -N)approach: Monotonic stress-strain behaviour, Strain controlled test methods, Cyclic stress-strain behaviour, Strain based approach to life estimation, Determination of strain life fatigue properties,Mean stress effects, Effect of surface finish, Life estimation by ε -N approach.	11
UNIT-3	LEFM Approach : LEFM concepts, Crack tip plastic zone, Fracture toughness, Fatigue crack growth, Mean stress effects, Crack growth life estimation. Notches and their effects: Concentrations and gradients in stress and strain, S-N approach for notched membranes, mean 30 stress effects and Haigh diagrams, Notch strain analysis and the strain – life approach, Neuber's rule, Glinka's rule, and applications of fracture mechanics to crack growth at notches.	10
UNIT-4	Fatigue from Variable Amplitude Loading: Spectrum loads and cumulative damage, Damage quantification and the concepts of damage fraction and accumulation, Cumulative damage theories, Load interaction and sequence effects, Cycle counting methods, Life estimation using stress life approach.	10
UNIT-5	Surface Failure: Introduction, Surface geometry, Mating surface, Friction, Adhesive wear, Abrasive wear, Corrosive wear, Surface fatigue spherical contact, Cylindrical contact, General contact, Dynamic contact stresses, Surface fatigue strength.	10

- 4. Fatigue of Materials, S.Suresh, Cambridge University Press, -1998

CO1	Distinguish different design criteria and their procedure to carry out the design of
	mechanical components.
CO2	Design machine components which are subjected to fluctuating loads.
CO3	Design machine components using techniques like stress life approach, Strain life
	approach and Fracture mechanics approach.
CO4	Define the various statistical aspects of fatigue using different probability
	distribution plots.
CO5	Explain the contact stresses and implementation of Hertz contact
	phenomenon to the real field problem.

-----------------------	--------------------------	-------------------------------								
SEMESTER : SEC	COND									
COURSE TITL	E: TRIBOLOGY & BEARIN	NG TECHONOLOGY								
Sub Code: 20MMD23	No of Credits : L-T-P-SS	No. of Lecture hours/week :04								
	3:0:0:0=3									
Exam Duration:3 hours	CIE Marks: 50	SEE MARKS:50								

- 1. To understand the fundamental principles of lubrication for reduction of friction and wear.
- 2. To understand the principles of hydrodynamic and hydrostatic lubrication and their design and applications.
- 3. To learn the computations required for selecting and designing bearings in machines.
- 4. To understand the factors influencing the design and selection of Porous and Magnetic bearings.

#	CONTENTS	Hrs
UNIT-1	Introduction to Tribology: Introduction, Friction, Wear, Wear Characterization,	11
	Regimes of lubrication, Classification of contacts, lubrication theories, Effect of	
	pressure and temperature on viscosity. Newton's Law of viscous forces, Flow	
	through stationary parallel plates. Hagen's poiseuille's theory, viscometers.	
	Numerical problems, Concept of lightly loaded bearings, Petroff's equation,	
	Numerical problems	
UNIT-2	Hydrodynamic Lubrications: Pressure development mechanism. Converging and	11
	diverging films and pressure induced flow. Reynolds's 2D equation with	
	assumptions. Introduction to idealized slide bearing with fixed shoe and Pivoted	
	shoes. Expression for load carrying capacity. Location of center of pressure, effect	
	of end leakage on performance, Numerical problems.	
	Journal Bearings: Introduction to idealized full journal bearings. Load carrying	
	capacity of idealized full journal bearings, Somerfield number and its significance,	
	partial bearings, Comparison between lightly loaded and heavily loaded bearings,	
	effects of end leakage on performance, Numerical problems.	
UNIT-3	Hydrostatic Bearings: Hydrostatic thrust bearings, hydrostatic circular pad,	10
	annular pad, rectangular pad bearings, expression for discharge, load carrying	
	capacity and condition for minimum power loss, numerical problems	
	Antifriction bearings: Advantages, selection, nominal life, static and dynamic load	
	bearing capacity, probability of survival, equivalent load, cubic mean load, bearing	
	mountings.	
UNIT-4	EHL Contacts: Introduction to Elasto - hydrodynamic lubricated bearings.	10
	Introduction to 'EHL' constant. Grubin type solution.	
	Porous Bearings: Introduction to porous and gas lubricated bearings. Governing	
	differential equation for gas lubricated bearings, Equations for porous bearings and	
	working principal, Fretting phenomenon and its stages.	
UNIT-5	Magnetic Bearings: Introduction to magnetic bearings, Active magnetic bearings.	10
	Different equations used in magnetic bearings and working principal. Advantages	
	and disadvantages of magnetic bearings,,Electrical analogy, Magneto-hydrodynamic	
	bearings.	

TEXT BOOKS:

- 1. Mujamdar.B.C "Introduction to Tribology of Bearing", Wheeler Publishing, New Delhi 2001
- 2. Radzimovsky, "Lubrication of Bearings Theoretical principles and design" Oxford press organization 2000.

REFERENCES BOOKS:

- 3. Engineering Tribology, G W Stachowiak, A W Batchelor, Elsevier publication 1993.
- 4. Lubrication of Bearings Theoretical principles and design, Radzimovsky, Oxford press Company, 2000.

CO1	Demonstrate fundamentals of tribology, lubricants and methods of lubrication						
CO2	Analyze bearings for load carrying capacity, frictional force and power loss.						
CO3	Illustrate the different modes of lubrication system for various applications.						
CO4	Design the different bearing system such as antifriction bearings for						
	various applications						
CO5	Explain the concepts advanced bearings like magnetic bearings,						
	porous bearings and gas lubricated bearings.

ADMISSION YEAR: 2020-21 SEMESTER: SECOND

ACADEMIC YEAR: 2020-21

COURSE TITLE:FRACTURE MECHANICS									
Sub Code: 20MMD24	No of Credits : L-T-P-SS	No. of Lecture hours/week :04							
	3:0:0:0=3								
Exam Duration:3 hours	CIE Marks: 50	SEE MARKS:50							

COURSE OBJECTIVES:

- 1. To understand the design principle of materials and structures using fracture mechanics approaches.
- 2. To introduce the mathematical and physical principles of fracture mechanics and their applications to engineering design.
- 3. To develop the ability in students to compute the stress intensity factor, strain energy release rate and the stress and strain fields around a crack tip for linear and non linear materials.
- 4. To prepare the students for broader applications of fracture mechanics in material testing, evaluation, characterization, and material selection.

#	CONTENTS	Hrs
UNIT-1	Fracture Mechanics Principles: Introduction and historical review, sources of	11
	micro and macro cracks, stress concentration due to elliptical hole, strength ideal	
	materials, Griffith's energy balance approach. Fracture mechanics approach to	
	design. NDT and Various NDT methods used in fracture mechanics, numerical	
	problems. The Airy stress function, complex stress function, solution to crack	
	problems, effect of finite size, special cases, elliptical cracks, numerical problems.	
UNIT-2	Plasticity effects, Irwin plastic zone correction, and Dugdale approach. The shape of	11
	the plastic zone for plane stress and plane strain cases, plastic constraint factor. The	
	thickness effect, and numerical problems.	
	Determination of stress intensity factors and plane strain fracture toughness:	
	Introduction, analysis and numerical methods, experimental methods, estimation of	
	stress intensity factors.	
	Plane strain fracture toughness test; standard test, and specimen size requirements.	
UNIT-3	The energy release rate, and criteria for crack growth. The crack resistance (R	10
	curve), compliance, J integral, tearing modulus and stability.	
	Elastic Plastic Fracture Mechanics (EPFM): Fracture beyond general yield. The	
	crack-tip opening displacement, the use of CTOD criteria, and experimental	
	determination of CTOD. Parameters affecting the critical CTOD, use of J integral,	
	and limitation of J integral.	
UNIT-4	Dynamics and crack arrest: Crack speed and kinetic energy. Dynamic stress	10
	intensity and elastic energy release rate. Crack branching. Principles of crack arrest.	
	Crack arrest in practice. Dynamic fracture toughness.	
		10
UNIT-5	Fatigue crack propagation and applications of fracture mechanics: Crack growth	10
	and the stress intensity factor. Factors affecting crack propagation. Variable	
	amplitude service loading, means to provide fail-safety, required information for	
	tracture mechanics approach, mixed mode (combined) loading and design criteria.

CO1	Develop basic fundamental understanding of the effects of crack like defects on the performance of aerospace, civil, and mechanical engineering structures.
CO2	Be able to select appropriate materials for engineering structures to insure damage tolerance.
CO3	Learn to employ modern numerical methods to determine critical crack sizes and fatigue crack propagation rates in engineering structures.
CO4	Understanding of experimental techniques to determine the critical values of parameters at crack tip.
CO5	Understand and appreciate of the status of academic research in field of fracture mechanics.

Exam Duration:3 hours	CIE Marks: 50	SEE MARKS:50						

- 1. To understand of the stages involved in automobile system design.
- 2. To expose the industrial practices in design of various systems of automobile.
- 3. To study importance and features of different systems like axle, differential, brakes, Steering, suspension, and balancing etc.
- 4. To study working of various Automobile Systems.

#	CONTENTS	Hrs
UNIT-1	Body Shapes: Aerodynamic Shapes, drag forces for small family cars.	10
	Fuel Injection : Spray formation, direct injection for single cylinder engines (both SI & CI), energy audit.	
UNIT-2	Design of I.C. Engine I: Combustion fundamentals, combustion chamber design,	10
	cylinder head design for both SI & C. I. Engines.	
UNIT-3	Design of I.C. Engine II: Design of crankshaft, camshaft, connecting rod, piston &	10
	piston rings for small family cars (max up to 3 cylinders).	
UNIT-4	Transmission System: Design of transmission systems – gearbox (max of 4-	10
	speeds), differential.	
	Suspension System: Vibration fundamentals, vibration analysis (single & two degree	
	of freedom, vibration due to engine unbalance, application to vehicle suspension.	
UNIT-5	Cooling System : Heat exchangers, application to design of cooling system	12
	(watercooled).	
	Emission Control : Common emission control systems, measurement of missions	
	exhaust gas emission testing.

CO1	Gain an insight into aspects of vehicle design, operation and maintenance, which will be
	useful for taking up a position in the automotive industry.

CO2	Apply the knowledge in creating a preliminary design of Automobile sub systems.
CO3	Identify construction, working, preventive maintenance, trouble shooting and diagnosis
	of various Automobile Systems.
CO4	Identify Modern technology and safety measures used in Automotive Vehicles.
CO5	Analyse the cooling and Emission control in automotive vehicles.

2. Student shall answer five full questions selecting one full question from each unit.										

ADMISSION YEAR	: 2020-21 A	ACADEMIC YEAR: 2020-21						
SEMESTER	: SECOND							
COURSE TITLE: DESIGN OF HYDRAULIC & PNEUMATIC SYSTEMS								
Sub Code: 20MMD253	No of Credits : L-T-P-SS	No. of Lecture hours/week :04						
	3:0:0:0=3							
Exam Duration:3 hours	CIE Marks: 50	SEE MARKS:50						

- 1. To understand of the stages involved in Hydraulic & Pnuematic design.
- 2. To expose the maintenance practices in various systems of hydraulics.
- 3. To study and analyze the hydraulic circuit design.
- 4. To study working of Pneumatic Systems.

#	CONTENTS	Hrs
UNIT-1	Introduction to Hydraulic System: Introduction, Basic hydraulic system,	10
	classification of hydraulic motors, hydraulic pumps, Performance of hydraulic	
	motors, Hydraulic actuators, types of hydraulic actuators.	
	Control Components in Hydraulic Systems: Introduction, Direction control	
	valves, Solenoid actuated valve, Pilot operated valve, Rotary spool DCV, Pressure	
	control valves, Hydraulic fuse, Flow control valve, graphic symbols.	
UNIT-2	Maintenance of Hydraulic Systems: Prime function of hydraulic fluids, desirable	10
	properties of hydraulic fluids, general types of fluids, factors affecting the selection	
	of fluids, sealing devices, reservoir systems, filters and strainers, heat exchangers,	
	pressure switch, wear of moving parts, troubleshooting of hydraulic systems.	
UNIT-3	Hydraulic circuit Design and Analysis: Control of a single acting cylinder, double	10
	acting cylinder, regenerative circuit, counter balance valve applications, Hydraulic	
	cylinder sequencing circuits, automatic cylinder reciprocating systems, Locked	
	cylinder using pilot check valves, cylinder synchronizing circuits, fail safe circuits	
UNIT-4	Pneumatic Concepts: Introduction, comparison of hydraulics/pneumatics/and	10
	electrical system, air compressor system, types of compressors, compressed air	
	behavior, pneumatic actuators, direction control valves, building a pneumatic	
	circuits, application of logic valves.	
	Design of Pneumatic Circuits: Speed control circuits, Application of time delay	
	valves. Position sensing in pneumatic cylinders, roller lever valve, pressure sensing	
	in pneumatic circuits, pressure sequence valve, two cylinder movement, cascade	
	method.	
UNIT-5	Electro-Pneumatics: Introduction, Pilot operated solenoid valve, Electrical	12
	connection to the solenoid, Electro-pneumatic circuit, Electrical limit switches and	
	proximity switches, Relays, Solenoid, PE converter, Concept of latching.	
	Servo System and PLC Applications in Pneumatics: Closed loop control with	
	servo system, Hydro- mechanical servo system, Electro-hydraulic servo system,	
	Conventional valve vs proportional valve, Proportional valve in hydraulic circuits,	
	characteristics of proportional valve and servo valve. PLC application in fluid	
	power, logic in ladder logic diagram and Mnemonics, Timer- on delay and of delay.

COURSE TITLE: ADVANCED FINITE ELEMENT ANALYSIS											
Sub Code: 20MMD254	No of Credits : L-T-P-SS	No. of Lecture hours/week :04									
	3:0:0:0=3										
Exam Duration:3 hours	CIE Marks: 50	SEE MARKS:50									

- 1. To understand of the stages involved in Hydraulic & Pneumatic design.
- 2. To expose the maintenance practices in various systems of hydraulics.
- 3. To study and analyze the hydraulic circuit design.
- 4. To study working of Pneumatic Systems.

#	CONTENTS	Hrs
UNIT-1	Basics of Finite Element Analysis : Shape function of the linear bar element, quadratic bar element, 2-D Constant strain triangular element, 2-D linear triangular element, 4 noded quadrilateral element, 9- noded quadrilateral element and	11
	element, 2-D truss element, CST element and 4 noded quadrilateral elements and related problems.	
UNIT-2	Axisymmetric Solids: Structures of Revolution, Axisymmetric Solid Iso-P Elements,Iso-P Quadrilateral Ring Elements, Benchmark Problems.A Complete Axisymmetric FEM Program. Axisymmetric Solid.	11
UNIT-3	General Solids : Solid Elements: Overview.The Linear Tetrahedron, The Quadratic Tetrahedron.The 8-Node Hexahedron. The 20-Node Hexahedron. Pyramid solid elements: a successful application of morphing.	10
UNIT-4	Dynamic Analysis using Finite Element Method : Introduction – vibrational problems – equations of motion based on weak form – longitudinal vibration of bars – transverse vibration of beams – consistent mass matrices – element equations –solution of eigenvalue problems – vector iteration methods – normal modes – transient vibrations – modeling of damping – mode superposition technique – direct integration methods.	10
UNIT-5	Applications in Heat Transfer & Fluid Mechanics: One dimensional heat transfer element –application to one-dimensional heat transfer problems- scalar variable problems in 2-Dimensions– Applications to heat transfer in 2- Dimension – Application to problems in fluid mechanics in 2-D	10

- 6. Advanced Finite Element Methods and Applicatons, Thomas Apel and Olaf Steinbach, Springer
- 7. Publications, ISBN 978-3-642-30315-9, 2013

CO1	Explain the fundamentals of finite element methods
CO2	Develop the knowledge to analyses, structures under static and dynamic conditions.
CO3	Selection of numerical techniques for solving engineering problems
CO4	Explore the use of finite element method knowledge to implement industrial project.
CO5	Analyze the applications of Finite Element Analysis in Heat transfer.

ADMISSION YEAR	: 2020-21 ACA	ACADEMIC YEAR: 2020-21				
SEMESTER	: SECOND					
COURSI	E TITLE: PRESSURE VESS	EL DESIGN				
Sub Code: 20MMD261	No of Credits : L-T-P-SS	No. of Lecture hours/week :04				
	3:0:0:0=3					
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50				

- 1. Apply the principles of product design to modify existing engineering systems or to develop new artifacts.
- 2. Design a system taking into consideration the concepts of ease of production, maintenance, handling, installation etc.
- 3. Translate the concepts of economics in design, optimization of design and human factors approach to product design.

#	CONTENTS	Hrs
UNIT-1	General Introduction: Review of equations of elasticity- kinematics,	11
	compatibility equations, stress measures- equations of motions- constitutive	
	relations- transformation of stresses, strains and stiffness- energy principles and	
	variational methods in elasticity- virtual work-external and internal virtual work	
	variational operator- functionals- Euler Lagrange equations- energy principles-	
	Hamilton's principle- principle of minimum total potential- applications.	
UNIT-2	Classical Theory Of Plates: Plates as structural elements- stress and moment	11
	resultants- assumptions made in the classical theory- displacement fields and	
	strains- equations of equilibrium in Cartesian coordinates and in polar	
	coordinates- boundary conditions - bending of rectangular plates with various	
	boundary conditions and loading- symmetrical and asymmetrical bending of	
	circular plates-limitations of classical theory- finite element analysis	
UNIT-3	Buckling Analysis of Rectangular Plates: Buckling of simply supported plates	10
	under compressive forces- governing equations- the Navier solution- biaxial	
	compression of a plate- uniaxial compression of a plate- buckling of plates	
	simply supported on two opposite edges- Levy's solution- buckling of plates	
	will various boundary conditions concred formulation finite element analysis	
LINIT A	Vibration of Plates: Governing equations for natural flavural vibrations of	10
UN11-4	rectangular plates, natural vibrations of plates simply supported on all edges	10
	vibration of plates with two parallel sides simply supported Lewy's solution	
	vibration of plates with different boundary conditions. Devleich Ditz method	
	Notural vibration of plates with general boundary conditions, transiont analysis	
	of regiongular plates, finite element analysis	
LINIT 5	A palysis of Thin Electic Shalls of Devolution: Classification of shall surfaces	10
UN11-5	Analysis of Thin Elastic Shells of revolution, consultation displacement relations	10
	geometric properties of shells of revolution- general strain displacement relations	
	for shells of revolution- stress resultants- equations of motion of thin shells,	
	analytical solution for thin cylindrical shells- memorane theory- flexure under	
	axisymmetric loads, shells with double curvature- geometric considerations-	
	equations of equilibrium- bending of spherical shells- vibration of cylindrical	
	snells- finite element analysis.

- 4. Stresses in shells, Wilhelm Flügge, Springer Verlag, *ISBN* 978-3-662-01028-0.

CO1	Review the equations of elasticity.										
CO2	Apply the structural mechanics approximations of membrane, plates and shells.										
CO3	Develop simple modifications to the membrane plate and shell theories.										
CO4	Describe the static, dynamic, and non-linear motion of membrane, plate and shell										
	structures.										
CO5	Analyze numerical problems in shells of revolution.										

MAPPING OF COs WITH POs

CO5	1		1		1				1		1	

QUESTION PAPER PATTERN (SEE)											
Q. No.	Q1	Q1 Q2 Q3 Q4 Q5 Q6 Q7 Q8 Q9 Q1									
UNIT	1		2		3		4		5		
1. Two f	1. Two full questions (each of 20 Marks) are to be set from each unit.										
2. Stude	nt shall	answei	five fu	ll questio	ons selec	ting one	e full aue	stion from	m each	unit.	

ADMISSION YEAR	: 2020-21	ACADEMIC YEAR: 2020-21								
SEMESTER	: SECOND									
COURSE TITLE: DESIGN FOR MANUFACTURE AND ASSEMBLY										
Sub Code: 20MMD262	No of Credits : L-T-P-SS	No. of Lecture hours/week :04								
	3:0:0:0=3									
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50								

- 1. To understand various general design rules for manufacturability and criteria for material selection
- 2. To study various machining process and tolerance aspects in machining.
- 3. To know the design considerations for casting, forging and welding process.
- 4. To study the general design guidelines for manual assembly and development of DFMA Methodology.

#	CONTENTS	Hrs
UNIT-1	Introduction to Design for Manufacture & Assembly: Steps in DFMA, Advantages	11
	of DFMA, Design guidelines for Manual Assembly and High-Speed Automatic and	
	Robotic Assembly.	
	Geometrical Dimensioning & Tolerance – Dimensions & Tolerance, Limits, Fits and	
	Tolerances, Hole and Shaft Basis, Three datum – functional, machining and	
	manufacturing, geometrical and form tolerance, conventional and advanced tools and	
	techniques for measurements, numerical.	
UNIT-2	Metal Casting Processes – Gravity Die Casting : compute the dimensions for Pattern,	11
	Mould, based on materials to be cast – ferrous and non-ferrous alloys, influence of	
	parting line, cast holes, special sand cores, shrinkage compensation, numericals,	
	Pressure Die Casting: Die casting alloys, machine selection, operation, sub-systems,	
	post-processing equipments, mould design, number of cavities, manufacturing and	
	assembly of moulds, design principles.	
UNIT-3	Design for Injection Molding – Injection moulding systems – injection subsystem,	10
	ejection system, clamping and feeding system, machine sizing, materials for injection	
	moulding and its properties, injection mould design – cavity and core, manufacturing	
	processes for moulds, operation and cycle time.	
UNIT-4	Design for Powder Metallurgy Processes : Introduction to PM process, blending and	10
	mixing, compaction, sintering processes. Tooling materials, heat treatment, surface	
	treatments and preparation of green compacts, Press tools for PM process – load,	
	tooling layout, capacity; sintering furnace and influence of process and	
	materials parameters on shrinkage.	10
UNIT-5	Design for Sheet Metal Processing: Design of moulds for shearing, piercing, bending,	10
	deep drawing, progressive die operation, selection of press – hydraulic and electric,	
	sub-systems, turret operation, cycle time calculation, laser cutting of sheet metals.	
	Cost Estimation for sand casting, pressure die casting, injection moulding, PM process	
	and sneet metal processes.

- 4. M. F. Spotts, Dimensioning and Tolerance for Quantity Production, Prentice Hall Inc., 1999.
- 5. **COURSE OUTCOMES:** After the completion of this course, student will be able to:

CO1	Explain the concept of DFMA and GD&NT.
CO2	Apply engineering products and suggest suitable manufacturing process.
CO3	Evaluate the influence of design, material and manufacturing processes on product
	assembly.
CO4	Develop appropriate manufacturing and assembly processes for a given product.
CO5	Analyze cost estimation of various metal processes.

MAPPING OF COs WITH POs												
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1		1	1					1		1	
CO2		1	1					1			1	
CO3	1		1		1				1		1	
CO4	1		1	1					1			
CO5	1			1	1				1		1	

QUESTION PAPER PATTERN (SEE)										
Q. No.	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Q10
UNIT	1			2	3		4		5	
1. Two f	1. Two full questions (each of 20 Marks) are to be set from each unit.									
2. Stude	2. Student shall answer five full questions selecting one full question from each unit.									

ADMISSION YEAR	: 2020-21 A	CADEMIC YEAR : 2020-21							
SEMESTER	: SECOND								
COURSE TITLE : SMART MATERIALS AND STRUCTURES									
Sub Code: 20MMD263	No of Credits : L-T-P-SS	No. of lecture hours/week :04							
	3:0:0:0 =3								
Exam Duration : 3 hours	CIE Marks: 50	Exam Marks:50							

- 1. To study the basic sources of smart materials and structures.
- 2. To acquaint with the effects of Shape memory Alloy, ER and MR fluids.
- 3. To study the usefulness of vibration absorbers and control of structures.
- 4. To gain knowledge of MEMS and devices.

#	CONTENTS	Hrs
UNIT-1	SMART STRUCTURES: Types of Smart Structures, Potential Feasibility of	11
	Smart Structures, Key Elements Of Smart Structures, Applications of Smart	
	Structures. Piezoelectric materials, Properties, piezoelectric Constitutive Relations,	
	Rate effects Inchworm Linear Motor	
	Rate effects, menworm Einear Wotor.	
UNIT-2	BEAM MODELING: Beam Modeling with induced strain Rate effects, Inchworm	11
	Linear Motor Beam Modeling with induced strain Actuation-single Actuators, dual	
	Actuators, Pure Extension, Pure Bending harmonic excitation, Bernoulli-Euler	
	beam Model, problems, Piezoelectric Applications.	10
UNIT-3	SHAPE MEMORY ALLOY: Experimental Phenomenology, Shape Memory Effect Phase Transformation Tanaka's Constitutive Model testing of SMA Wires	10
	Vibration Control through SMA Multiplexing Applications Of SMA and	
	Problems.	
	ER and MR Fluids: Mechanisms and properties, Fluid Composition and behavior,	
	The Bingham Plastic and Related Models, Pre-Yield Response. Post-Yield flow	
	applications in Clutches, Dampers and Others	
UNIT-4	VIBRATION ABSORBERS: series and Parallel Damped Vibrations (Overview),	10
	Active Vibration Absorbers, Fiber Optics, Physical Phenomena. Characteristics,	
	Sensors, Fiber Optics in Crack Detection, applications.	
	Control of Structures: Modeling Control Strategies and Limitations Active	
	Structures in Practice.	
UNIT-5	MEMS – Mechanical Properties of MEMS Materials, Scaling of Mechanical	10
	Systems, Fundamentals of Theory, The Intrinsic Characteristics of MEMS,	
	Devices: Sensors and Actuators, Conductivity of Semiconductors, Crystal Planes	
	and Orientation, (Stress and Strain Relations, Flexural Beam Bending Analysis	
	Under Simple Loading Conditions), Polymers in MEMS, Optical MEMS	
	Applications.

ADMISSION YEAR	: 2020-21 A	ACADEMIC YEAR: 2020-21								
SEMESTER	: SECOND									
COURSE TITLE: INDUSTRIAL AUTOMATION AND ROBOTICS										
Sub Code: 20MMD264	No of Credits : L-T-P-SS	No. of Lecture hours/week :04								
	3:0:0:0=3									
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50								

- 1. To develop the student's knowledge in various robot structures and their workspace.
- 2. To develop student's skills in perform kinematics analysis of robot systems.
- 3. To provide the student with some knowledge and analysis skills associated with trajectory planning.
- 4. To provide the student with some knowledge and skills associated with robot control and automation.

#	CONTENTS	Hrs
UNIT-1	Automation and Robotics - Historical Development, Definitions, Basic Structure of	11
	Robots, Robot Anatomy, Complete Classification of Robots, Fundamentals about	
	Robot Technology, Factors related to use Robot Performance, Basic Robot	
	Configurations and their Relative Merits and Demerits, Types of Drive Systems and	
	their Relative Merits, the Wrist & Gripper Subassemblies. Concepts and Model	
	about Basic Control System, Control Loops of Robotic Systems, PTP and CP	
	Trajectory Planning, Control Approaches of Robots	
UNIT-2	Kinematics of Robot Manipulator: Introduction, General Description of Robot	11
	Manipulator, Mathematical Preliminaries on Vectors & Matrices, Homogenous	
	Representation of Objects, Robotic Manipulator Joint Co-Ordinate System, Euler	
	Angle & Euler Transformations, Roll-Pitch-Yaw(RPY) Transformation, Relative	
	Transformation, Direct & Inverse Kinematics' Solution, D H Representation &	
	Displacement Matrices for Standard Configurations, Geometrical Approach to Inverse	
	Kinematics. Homogeneous Robotic Differential Transformation: Introduction,	
	Jacobian Transformation in Robotic Manipulation	
UNIT-3	Robotic Workspace & Motion Trajectory: Introduction, General Structures of	10
	Robotic Workspaces, Manipulations with n Revolute Joints, Robotic Workspace	
	Performance Index, Extreme Reaches of Robotic Hands, Robotic Task Description.	
	Robotic Motion Trajectory Design: - Introduction, Trajectory Interpolators, Basic	
	Structure of Trajectory Interpolators, Cubic Joint Trajectories. General Design	
	Consideration on Trajectories: 4-3-4 & 3-5-3 Trajectories, Admissible Motion	
	Trajectories.	
UNIT-4	Dynamics of Robotic Manipulators : Introduction, Bond Graph Modeling of Robotic	10
	Manipulators, Examples of Bond Graph Dynamic Modeling of Robotic Manipulator.	
	Brief Discussion on Lagrange–Euler (LE) Dynamic Modeling of Robotic	
	Manipulators: - Preliminary Definitions, Generalized Robotic Coordinates, Dynamic	
	Constraints, Velocity & Acceleration of Moving Frames, Robotic Mass Distribution	
	& Inertia Tensors, Newton's Equation, Euler Equations, The Lagrangian& Lagrange's	
	Equations. Application of Lagrange–Euler (LE) Dynamic Modeling of Robotic	
	Manipulators: - Velocity of Joints, Kinetic Energy T of Arm, Potential Energy V of	
	Robotic Arm, The Lagrange L, Two Link Robotic Dynamics with Distributed Mass,	
	Dynamic Equations of Motion for A General Six Axis Manipulator.	

UNIT-5Autonomous Robot: Locomotion Introduction, Key issues for locomotion Legged
Mobile Robots Leg configurations and stability Examples of legged robot locomotion
Wheeled Mobile Robots Wheeled locomotion: the design space Wheeled locomotion:
case studies Mobile Robot Kinematics Introduction Kinematic Models and Constraints
Representing robot position Forward kinematic models Wheel kinematic constraints
Robot kinematic constraints, Mobile Robot manoeuvrability Degree of mobility
Degree of steerability Robot manoeuvrability.10

REFERENCE BOOKS:

ADMISSION YEAR : 2020-21 SEMESTER · SECOND

ACADEMIC YEAR: 2020-21

COURSE TITLE: ANALYSIS LAB										
Sub Code: 20MMDL28	No of Credits : L-T-P-SS 0:0:3:0=2	No. of Lecture hours/week :03								
Exam Duration:3 hours	CIE Marks: 50	Exam Marks :50								

COURSE OBJECTIVES:

- 1. To be able to understand and handle design problems in systematic manner
- 2. To gain practical experience in 2D drafting and 3D modeling software systems.
- 3. To be able to apply CAD in real life applications.
- 4. To be able to understand Various software used to solve the practical problems

CONTENTS	Hrs.								
PART-A									
I. Study of a FEA package and modelling stress analysis of									
Bars of constant cross section area and stepped bar	02								
Trusses- (Minimum 6 exercises)	08								
Beams - Simply supported, cantilever. beams with UDL, beams with varying load.etc (Minimum 10 exercises).	10								
PART -B									
I. Thermal Analysis - 2D problem with conduction and convection									
boundary conditions (Minimum 4 exercises)									
II. Fluid flow Analysis - Potential distribution in the 2 - D bodies	4								
III Dynamic Analysic									
 Fixed- fixed beam for natural frequency determination 	12								
Bar subjected to forcing function									
Fixed- fixed beam subjected to forcing function									
	CONTENTS PART-A I. Study of a FEA package and modelling stress analysis of > Bars of constant cross section area and stepped bar > Trusses- (Minimum 6 exercises) > Beams - Simply supported, cantilever. beams with UDL, beams with varying load.etc (Minimum 10 exercises) . PART -B I. Thermal Analysis - 2D problem with conduction and convection boundary conditions (Minimum 4 exercises) II. Fluid flow Analysis - Potential distribution in the 2 - D bodies III. Dynamic Analysis > Fixed- fixed beam for natural frequency determination > Bar subjected to forcing function > Fixed- fixed beam subjected to forcing function

- > Two Full Questions to be set.
- Students shall be to be answered two full Questions.
- Each question(Experiments contains different Marks and it is clearly mentioned in the above table)
- > Changing of Experiments is not allowed from any unit
- Viva Voce is compulsory

ADMISSION YEAR	: 2020-21	ACADEMIC YEAR: 2020-21									
SEMESTER	: SECOND										
COURSE TITLE: PROJECT WORK PHASE -I											
Sub Code: 20MMDP29	No of Credits : L-T-P-SS	No. of Lecture hours/week :									
	0:0:0:12=06										
Exam Duration:	CIE Marks: 50	SEE Marks :									

- 1. Support independent learning.
- 2. A aim of identifying a problem in the area relevant to the program.
- 3. To formulate a research problem in the area relevant to the program
- 4. Guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly.

GUIDELINES

- **1.** The Project Work will start in Third semester and should preferably be a problem with research potential and should involve scientific research, design, generation/collection and analysis of data, determining solution and must preferably bring out the individual contribution.
- 2. The students are required to take up a project work relevant to the course, which involves
 - ➢ Introduction
 - literature review
 - ➢ problem formulation
 - ➢ methodology
 - analysis of results and discussion
 - ➢ future scope and conclusion
- **3.** The candidate has to be in regular contact with his guide and the topic of dissertation must be mutually decided by the guide and student.
- **4.** Extensive survey should be based on the area of specialization in which the candidate wish to do the dissertation work.
- **5.** The student should prepare a report consisting of a detailed problem statement and a literature review. The preliminary results (if available) of the problem may also be discussed in the report.
- 6. Present the seminar on the selected project through power point slides.
- 7. The work has to be presented in front of the examiners panel set by Head of Department.

Scheme for Continuous Internal Evaluation (CIE) :

CIE marks for the report (20 marks), seminar (20 marks) and question and answer session (10 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session by the student) by the committee constituted for the purpose by the Head of the Department, The committee shall consist of three faculty from the department in the area of specialization.

CO1	Demonstrate a sound technical knowledge of their selected project topic.
CO2	Will be able to identify a problem in the area relevant to the program through literature
	survey.
CO3	The candidate would have prepare a consolidated report of the problem formulation.
CO4	Design engineering solutions to complex problems utilising a systems approach.
CO5	Demonstrate the knowledge, skills and attitudes of a design engineer.

Sl.	MOOC SUBJECT NAME
No.	

Sub Code: 20MMD31	No of Credits : L-T-P-SS 0:0:0:08=04	No. of Lecture hours/week :
Exam Duration:3 hours	CIE Marks: 50	SEE Marks :50

	GUIDELINES
\triangleright	The student shall choose and register for any of the following NPTEL/SWAYAM
	core course amounting to a minimum of 16 weeks.
	List of Massive Open Online Courses (NPTEL/SWAYAM) will be decided in the
	Board of Studies meeting.
	Students shall register for MOOC during 1^{st} / 2^{nd} / 3^{rd} semester and shall be
	completed before the last working day of the 3 rd semester.
\triangleright	The student shall choose a MOOC subject which is confined to his specialization
	and part of his final year thesis.
\triangleright	The assignment and examination marks along with certificate should be submitted
	to the examination section.

1.	Gas Dynamics and propulsion
2.	Nonlinear vibrations
3.	Modelling and control of Dynamic Electro Mechanical System
4.	Computer aided engineering design
5.	Kinematics of machines
6.	Finite Element Method: Variation Methods to Computer Programming
7.	Selection of Nanomaterials For Energy Harvesting And Storage Application
8.	Introduction to Mechanical Micro Machining
9.	Transport Phenomena in materials

ADMISSION YEAR:	2020-21	ACADEMIC YEAR: 2021-22									
SEMESTER:	THIRD										
	COURSE TITLE: INTERNSHIP										
Sub Code: 20MMDI32	No of Credits : L-T-P-SS	No. of Lecture hours/week :									
	0:0:0:16=08										
Exam Duration:3 hours	CIE Marks: 50	SEE Marks :50									

- 1. Expose technical students to the industrial environment, which cannot be simulated in the classroom and hence creating competent professionals for the industry.
- 2. Provide possible opportunities to learn, understand and sharpen the real time technical / managerial skills required at the job.
- 3. Expose students to the engineer's responsibilities and ethics.
- 4. Understand the psychology of the workers and their habits, attitudes and approach to problem solving.

GUIDELINES

- 1. Internship must be related to the field of specialization.
- 2. The duration of the internship shall be for a period of 16 weeks on full time basis after II semester SEE exams.
- 3. Two guides will supervise the internship project work, one from the department and another one from industry.
- 4. The student must submit letters from the industry clearly specifying his / her name and the duration of the internship on the company letter head with authorized signature.
- 5. The candidate should submit a synopsis of the proposed work to be done during Internship programme. The synopsis received should be evaluated by the departmental committee.
- 6. The students shall report the progress of the internship to the internal guide twice in a month and seek internal guide advise.
- 7. Interim reports as required by the industry / organization can be submitted as per the format acceptable to the respective industry /organizations.
- 8. Students have to present the internship activities carried out to the departmental committee and only upon approval by the committee, the student can proceed to prepare and submit the hard copy of the final internship report.
- 9. The final project presentation is evaluated on the basis of the recommendation given by outside supervisor and Internal guide.
- 10. The external guide from the industry has to be an examiner for the viva voce on Internship. Viva-Voce on internship shall be conducted at the college and the date of Viva-Voce shall be fixed in consultation with the external Guide. The Examiners shall jointly award the Viva Voce marks.

SCHEME FOR CONTINUOUS INTERNAL EVALUATION (CIE)

CIE marks for the Internship report (30 marks), seminar (10 marks) and question and answer session (10 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session by the student) by the committee constituted for the purpose by the Head of the Department, The committee shall consist of three faculty from the department.

SCHEME FOR SEMESTER END EVALUATION (SEE)

The SEE examination shall be conducted by an external examiner (domain expert) and an internal examiner. Evaluation done in Individually.

CO1	The purpose of the student internship program is to provide students with an opportunity to
	gain workplace skills
CO2	The internship will provide training that would be similar to that which would be given in
	an educational environment, including the Work Station and other hands-on training
	provided by educational institutions
CO3	Excellent opportunity to see how the theoretical aspects learned in classes are integrated
	into the practical world.
CO4	Opportunity to learn strategies like time management, multi-tasking etc in an industrial
	setup.
CO5	Opportunity to learn new skills and supplement knowledge

MAPPING OF COs WITH POs												
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO2		1		1								
CO3	1		1	1							1	
CO4		1										
CO5	1			1		1					1	

ADMISSION YEAR: 2020-21 SEMESTER: THIRD

ACADEMIC YEAR: 2021-22

COURSE TITLE: TECHNICAL SEMINAR									
Sub Code: 20MMDS33	No of Credits : L-T-P-SS 0:0:2:0=02	No. of Lecture hours/week :							
Exam Duration:	CIE Marks: 50	SEE Marks :							

COURSE OBJECTIVES:

- 1. Exposure of students to a variety of research projects and activities in order to enrich their academic experience.
- 2. An opportunity for students to develop skills in presentation and discussion of research topics in a public forum.
- 3. To identify good journals and journal papers; study the papers and understand, analyze, interpret and explain the contents of the paper.

GUIDELINES

1.Each student, under the guidance of a Faculty, is required to

- > Choose, preferably through peer reviewed journals, a recent topic of his/her interest relevant to the Course of Specialization.
- > Carryout literature survey, organize the Course topics in a systematic order.
- > Prepare the report with own sentences.
- > Type the matter to acquaint with the use of Micro-soft equation and drawing tools or any such facilities.
- > Present the seminar topic orally and/or through power point slides.
- > Answer the queries and involve in debate/discussion.
- > Submit two copies of the typed report with a list of references.
- 2. All students should attend the seminars of other students of their specialization.

SCHEME FOR CONTINUOUS INTERNAL EVALUATION (CIE)

Each presentation shall be evaluated for 50 marks. Average marks obtained for three best presentations will be the student's CIE marks. **Marks distribution**

- Seminar Report: 20 marks
- Presentation skill:20 marks
- Viva Voce:10 marks

CO1	To identify good journals and journal papers
CO2	study the papers and understand, analyze, interpret and explain the contents of the paper
CO3	understand the shortcomings and plus points of published papers
CO4	To develop overall skills for technical communication and help technical decision making
CO5	To understand the latest research in their field of study

MAPPING OF COs WITH POs												
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1		1		1	1			1		1	
CO2		1		1					1		1	
CO3	1		1		1				1		1	
CO4		1		1					1		1	
CO5	1		1		1						1	

ADMISSION YEAR: 2020-21 SEMESTER: THIRD

COURSE TITLE: EVALUATION OF PROJECT WORK PHASE I

Sub Code: 20MMDP34	No of Credits : L-T-P-SS 0:0:0:12=06	No. of Lecture hours/week :
Exam Duration:3 Hrs.	CIE Marks: 50	SEE Marks :50

COURSE OBJECTIVES:

- 1. Support independent learning.
- 2. The aim is to identify a problem in the area relevant to the program.
- 3. To formulate a research problem in the area relevant to the program
- 4. Guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly.

GUIDELINES

- 1. Evaluation of Project Work Phase I is continuation of Phase-I.
- 2. The duration of the Phase-II shall be of 16 weeks.
- 3. The student needs to complete the project work in terms of literature survey, objectives of the work and methodology.
- 4. The preliminary results (if available) of the problem may also be discussed in the report.
- 5. The student should prepare a report consisting of a detailed Literature Review and Methodology.
- 6. Present the seminar on the selected project through power point slides.
- The work has to be presented in front of the examiners panel set by Head of Department.

Scheme for Continuous Internal Evaluation (CIE) :

CIE marks for the report (20 marks), seminar (20 marks) and question and answer session (10 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session by the student) by the committee constituted for the purpose by the Head of the Department, The committee shall consist of three faculty from the department in the area of specialization.

Semester End Examination (SEE) :

Project Report: 20 Marks.

- The basis for awarding the marks shall be the involvement of the student in the project and in the preparation of project report.
- > To be awarded by the internal guide in consultation with external guide if any.

Project Presentation: 20 Marks.

- The Project Presentation marks of the Evaluation Of Project Work Phase -I shall be awarded by the committee constituted for the purpose by the Head of the Department.
- The committee shall consist of three faculty from the department with the senior most acting as the Chairperson.

Viva Voce: 10 Marks.

The student shall be evaluated based on the ability in the Question and Answer session for 10 marks.

CO1	Make links across different areas of knowledge and to generate, develop and evaluate ideas
	and information so as to apply these skills to the project task.
CO2	Habituated to critical thinking and use problem solving skills.
CO3	The candidate would have applied the technical knowledge learnt to prepare a
	methodology to solve the research problem formulated.
CO4	The candidate would have conducted the experiments according the standards acceptable
	by the peers.
CO5	Understand experimental investigations to verify predictions by other methods.

MAPPING OF COs WITH POs												
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1		1		1				1		1	
CO2		1		1				1	1			
CO3	1		1		1						1	
CO4		1			1				1		1	
CO5	1		1		1							

ADMISSION YEAR: 2020-21 SEMESTER: FOURTH

ACADEMIC YEAR: 2021-22

COURSE TITLE: PROJECT PHASE- II									
Sub Code: 20MMDP41	No of Credits : L-T-P-SS	No. of Lecture hours/week :							
	0:0:0:08=02								
Exam Duration:	CIE Marks: 100	SEE Marks :							

COURSE OBJECTIVES:

- 1. To expand intellectual capacity, credibility, judgement, intuition.
- 2. To impart flexibility and adaptability.
- 3. The candidate should be able to prepare a comprehensive report of the project work.
- 4. To induce responsibilities to oneself and others.

GUIDELINES

- 1. Project Phase -II is continuation of Evaluation of Project Work Phase -I.
- 2. The duration of the Phase-II shall be of 16 weeks.
- 3. The student needs to complete the project work in terms of methodology (experimental set up or numerical details as the case may be) of solution and Results.
- 4. The student is expected to exert on design, development and testing of the proposed work.
- 5. The student should prepare a report consisting of a detailed report comprising of summary of literature survey, detailed objectives, project specifications, paper and/or computer aided design, proof of concept/functionality, part results, A record of continuous progress.
- 6. Present the seminar on the selected project through power point slides.
- 7. The work has to be presented in front of the examiners panel set by Head of Department.

Scheme of Continuous Internal Examination (CIE)

Evaluation shall be carried out in three reviews. The evaluation committee shall consist of Guide, Professor/Associate Professor and Assistant Professor.

	Activity	Marks	
1.	Review and refinement of Objectives and Literature Review	20 Marks	
2.	Project Specifications, Computer Aided Design	40 Marks	
3.	Experimental Result & Analysis	40 Marks	
	Total	100 Marks	

CO1	Work in a team to achieve common goal.
CO2	Learn on their own, reflect on their learning and take appropriate actions to improve it.
CO3	Communicate the solutions through presentations and technical reports.
CO4	Enhance presentation skills and report writing skills.
CO5	Develop alternative solutions which are sustainable.

MAPPING OF COs WITH POs												
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1			1					1		1

CO4	1	1		1								
CO5	1			1					1		1	
ADMISSION YEAR: 2020-21 SEMESTER: FOURTH

ACADEMIC YEAR: 2021-22

DENIEDTER, FOURTH							
COURSE TITLE: PROJECT WORK EVALUATION AND VIVA VOCE							
Sub Code: 20MMDP42	No of Credits : L-T-P-SS	No. of Lecture hours/week :					
	0:4:0:24=18						
Exam Duration:3 Hrs.	CIE Marks: 100	SEE Marks :100					

COURSE OBJECTIVES:

- 1. To expand intellectual capacity, credibility, judgement, intuition.
- 2. To impart flexibility and adaptability.
- 3. The candidate should be able to prepare a comprehensive report of the project work.
- 4. To induce responsibilities to oneself and others.

GUIDELINES

- 1. Project Phase -II is continuation of Evaluation of Project Work Phase -I.
- 2. The duration of the Phase-II shall be of 16 weeks.
- 3. The student needs to complete the project work in terms of results and discussion of the Experimentation and Analysis of the defined problem.
- 4. The student should bring out the conclusions of the work and future scope for the study.
- 5. The student should prepare a report consisting of a detailed report comprising of summary of literature survey, detailed objectives, project specifications, paper and/or computer aided design, proof of concept/functionality, part results, A record of continuous progress.
- 6. The student should prepare the project report as per the norms avoiding plagiarism.
- 7. The student should present the seminar on the selected project through power point slides.
- 8. The work has to be presented in front of the examiners panel set by Head of Department.

SCHEME FOR SEMESTER END EVALUATION (SEE):

Major Project Phase-II SEE shall be conducted in two stages. This is initiated after fulfilment of submission of project report.

Stage-1: Evaluation of Report

Evaluation of Project Report shall be done by guide and an external examiner.

Stage-2: <u>Project Viva-voce</u>

Major Project Viva-voce examination is conducted after receipt of evaluation reports from guide and external examiner.

Both Stage-1 and Stage-2 evaluations shall be completed as per the evaluation formats.

SEE Marks	Internal Guide	External Guide	Total		
Report	100 Marks	100 Marks	200 Marks		
Evaluation					
Viva-Voce	Joint evaluation by In	ternal Guide & External	100 Marks		
	Evaluator				
		Total	300 Marks		

COURSE OUTCOMES: After the completion of this course, student will be able to:

CO1	The Student will develop attitude of lifelong learning					
CO2	The Student will learn to write technical reports and research papers to publish at national					
	and international level					
CO3	The Student will develop strong communication skills to defend their work in front of					
	technically qualified audience					
CO4	The Student will be able to either work in a research environment or in an industrial					
	environment					
CO5	Synthesize self-learning, sustainable solutions and demonstrate life-long learning.
